Citation: :Pezone, L. A. (2023). *The Spawhe rhyme and the map of the website <https://www.spawhe.eu>. J of Psych and Neuroche Res, 1(1), 01-07.*

I am publishing a generic letter from the undersigned, addressed to publishers who should provide impartial scientific information, which unfortunately is impossible today due to commercial inventions favored by governments, multinationals and public and private science for reasons of specific economic interests or simply, to retain obsolete jobs. Never in the general interests of the planet.

Dear Editor you can publish all articles which are listed in my website list. My inventions have never been made by any government and by any multinational they are always new. If you need the original version, I'll send it to you. I can't go on forever inventing new inventions that nobody wants to make. Many of you also want to get paid to publish my articles but I can't pay you, even if I respect your work. I don't even pay the organizers of international congresses to which I am invited for the simple fact that I do not participate in these congresses. I have nothing to say beyond what I wrote and illustrated with drawings on my website [Https://www.spawhe.eu](https://www.spawhe.eu). Only inventors employed by public bodies and private companies who are interested in selling commercial solutions that cannot solve the serious environmental, environmental and public health problems of our time can participate in these congresses. It is the employers of these inventors who bear the costs of publishers and congresses, certainly not the inventors who are forced to invent commercial solutions that are advantageous for their employers, without being able to sink the scalpel into the real global sores. Commercial inventions in many cases are harmful to the entire world community. With the silences collected in the entire world scientific community, I have come to the conclusion that those who remain silent consent and to the awareness of having conceived the best purification and energy inventions of the last two hundred years, without the contribution of governments, science and multinationals. Indeed, their tacit but clear opposition was the greatest stimulus to delve into the arguments. I just have to wait for history to shed light on my work as a designer, installer and inventor of terrestrial sustainable anthropic purification and

energy plants, and for the nursery rhyme of SPAWHE (Synergic Plants Artificial Welling Hydroelectromagnetic Energy), when it will finally be understood by the majority of people in common sense, is declared a technical and scientific heritage of humanity. Probably, this will happen when I am no longer alive. This will be my only reward, which I will share only with some scientists of the past, who helped me understand the basic fluid dynamics and electromagnetic phenomena, alternatives to the thermodynamic and nuclear ones that are destroying the planet. In fact, it is a contradiction that even today we are governed by a world ruling class that has inherited thermodynamic and nuclear inventions for eight successive generations without anyone realizing that the planet Terra was born to be managed cold. Whoever governed in the last two hundred years has produced global warming, not saving resources, but losing out economically, because nothing can cost less than an energy that purifies the environment simply by exploiting Henry's principle everywhere and which can be extracted directly from the environment, without extraction, transformation and transport charges, without purification and cooling charges for the energy produced. We have to ask ourselves: why weren't these simple inventions conceived despite the fact that the industrial age is now two hundred years old? I think because science and politics have not been able to select useful inventions from useless and harmful ones. Global warming and the unequal distribution of world wealth have been inevitable, due to the unpreparedness of science and the political ruling class, which have never reasoned globally, observing the terrestrial nature, not that of the universe, to choose the best solutions to purify and produce energy. Personally, I thought that inventions are made with the heart as well as with the mind. But, like everyone, I thought the heart was an organ connected to our feelings and emotions. In reality. The human heart is a simple pneumatic pump that accelerates or decreases the beats according to the electromagnetic stimuli produced by the neurons of the brain. It is no coincidence that among my inventions there is also the energetically autonomous blood oxygenator artificial

heart, as this artificial heart works with the same hydro-electromagnetic principles neglected by world science that produced global warming. No scientist has thought that if man is different from other terrestrial beings it is due to the fact that he is capable of developing much more complex ideas. This ability can only increase, increasing the oxygenation capacity of the blood. Consequently, with my artificial heart, in addition to extending human life by many years, human intellectual abilities will also increase considerably. Unfortunately, the world ruling class that produced global warming cannot make exceptions, creating the artificial heart with compressed hydro-electromagnetic energy, mini autoclaves, mini pumps with separate dual power supply up to the impeller, mini turbines and mini current generators, without realizing the same systems also in the production of energy on a large scale in industries, in homes, in land, marine, aeronautical and space transport. It would be too simple to deduce that if the small energetically autonomous artificial heart worked and lengthened the human lifespan without fuels, nuclear energy and energy accumulators, we have made the whole world development wrong. In fact, despite the progress made with artificial intelligence, based above all on electronics, information technology and electromagnetism, the world's primary energies still remain the obsolete fossil and nuclear ones which cannot be autonomous and self-purifying, just as they cannot be current renewable energies: solar, wind, hydroelectric, hydrolytic.

I did not like the first measure against the expensive energy of the new Italian government which was the resumption of drilling in the Italian sea, neither from an economic, nor scientific, nor environmental point of view, for the simple fact that there is a much more simple, economical and clean to extract energy from the environment. It is sufficient to overturn the current pumps and make them pump in the direction of the gravitational force by placing them in series with the turbines connected to the electric current generators. By turning the pump which would be powered with a small part of the energy produced by the turbine and the current generator by exploiting the gravitational force and the hydrostatic head. But this would be only the first step towards a completely different development model from the current one, as briefly described in Spawhe's rhyme and in more detail in the map of the website <https://www.spawhe.eu>. Here is spawhe's rhyme:

"The cleaning of fossil energy published in spawhe, to be efficient, should be based, above all on inorganic chemistry that is able to absorb CO₂, producing carbonates in the water, so that they counteract the acidification of the oceans and global warming. To speed up the processes and reduce the energy costs that would have involved the circulation of very large quantities of water necessary to neutralize the very large quantities of CO₂ emitted by the current thermal power plants and heat engines, it has gradually been transformed technologically into solutions of less space by exploiting the principles Pascal and Henry. In fact, I realized that on planet Earth, all the activities that nature produces through organic and inorganic chemistry, photosynthesis and the carbon cycle can be increased in speed without any need to use thermal, nuclear energy and current renewables. It is sufficient only to increase the operating pressures of the systems, modify the circulation pumps and make the machines work differently. In fact, natural interactive systems expel, with the times required by nature, the elements extraneous to natural cycles, due to accidental polluting phenomena, including direct and indirect thermal effects due to volcanic explosions, to natural fires

that have always existed on the planet. The current industrial activities of men have multiplied exponentially the elements extraneous to natural cycles, therefore nature is no longer able to restore interactive balances. Obviously, this is my truth and in the entire website, I explain how, in my opinion, we should have created global plants that purify both fumes and water at the same time before they go to pollute the soils, rivers, lakes and seas. Having not done this in any country in the world, it has not been possible to advance the state of the art of purification to make it known to other countries. Therefore, the advancement of the state of the global purification art has not occurred. Consequently, it was not even possible to notice that the water circulation pumps, if we make them work in the direction of gravitational force, by placing them in series with the turbines, we could extract the energy directly from the environment. Having not done this, it was not possible to realize that the water circulation pumps, if in addition to making them pump in the direction of gravitational force, we modify them on the suction side and make them another inlet clearly separated from the main one up to the same impeller, we can always use the same water to create energy because we use one feed to recycle the water from the upper basin and the other feed to introduce into the same impeller the water discharged from a turbine fed by falling water from the same upper basin. Not having done this, it was not possible to think that by replacing the upper basin with a pressurized autoclave with compressed air, it being understood that we use a turbine connected to the outlet of the autoclave, we can recover the water drained from the turbine and insert it back into the autoclave, whose pressurized water is recycled with the same impeller of the pump by means of the second supply. In this way, with the same water and the same compressed air, we would have produced a current generator that extracts energy from the environment, with quite small dimensions. Having not done this, it was not possible to further reduce the dimensions of this current generator by increasing the operating pressure of the autoclave in order to be able to mount it on cars and trucks, on agricultural tractors. Not having done this, it was not possible to think that the overall dimensions can still be reduced by using submersible pumps as turbines mounted directly in cylindrical tubes that would act as autoclaves. Therefore, these groups could be used to be inserted directly into the wells to raise the water and at the same time oxygenate the aquifers which today are polluted by agricultural fertilizers, herbicides and pesticides and fecal coliforms. In fact, we know that part of the air that pressurizes the autoclave dissolves in the water according to Henry's principle, purifying the water for free. Not having done this, it was not possible to think that the overall dimensions could be reduced even further. Even miniaturized and instead of purifying the water from the wells we could purify the human blood, placing two small autoclaves side by side that would replace the right and left ventricles, creating energetically autonomous artificial hearts that would feed the systemic circuit that oxygenates the brain and the lungs to lengthen the life of the 'man. Having not done this, it was not possible to think that pressurized cylindrical autoclaves can be incorporated an external cylinder containing water at atmospheric pressure, outside of which sliding tracks of permanent magnets mounted on transmission chains driven by motors can be made electric at variable revolutions that would produce an electromagnetic flux of variable intensity which would produce induced currents in a solenoid outside the same water tank. Therefore, we could produce in this tank a lin-

ear electromagnetic thrust force according to Lorentz's law at the ambient temperature, without fuel that could be added to the reaction thrust of Newton that would be produced by propellers driven by electric motors always commanded by generators. of current that produce the primary hydroelectric energy, fed by submersible pumps used as turbines placed inside the central reservoirs. Not having done this, it was not possible to replace the current thermal turbofans of aircraft to travel in the atmosphere and in space with energy extracted directly from the environment, it was not possible to create flying cars, nor submarines that move with the same system without fuel. It was not possible to make the ships travel without fuel, nor to mount the same system to make mobile barriers in the sea to defend ourselves from high waters. It was not even possible to think that in the space travel of the future we can add to the global linear motors an external steel tunnel connected to the turbo fan, where it will produce a higher vacuum higher than the surrounding space vacuum and connect this tunnel with a small vacuum pump to a thickening tank of the captured powders, which will be emptied periodically letting in the atmospheric air which will feed an electrostatic filter that will recover the powders that will be used together with the other interactive purification and energy plant inventions described on the website <https://www.spawhe.eu> to make humans survive even in space without suffering physiological damage due to the absence of atmospheric pressure, gravity, food resources and raw materials to build spare parts for the machines necessary for survival in space. In fact, atmospheric air and water will fill the space caravan wagons full of human beings and will be endlessly recycled, suitably replenished with artificial photosynthesis and carbon cycle, while general gravity will be reinforced, becoming very similar. to the terrestrial one, electrostatically polarizing the paths of atmospheric conditioned air and recycled water in the interactive, energy and purification, compressed hydroelectromagnetic plants, still unknown to terrestrial science. Current science has forgotten that the primary fluid dynamic energy is produced by the flow rate for the pressure and density of the fluid itself. Therefore, the best solution to produce clean energy at low cost and in infinite quantities is: to use compressed air as an energy source (which is not consumed) and water as an energy carrier (which with the use of new pumps with separate double power supply up to the impeller, can recycle it indefinitely by exploiting the maximum pressure of the compressed air and the maximum density of the water at the same time. In the simple formula of fluid dynamic energy mentioned above, no heat source is needed. This is the biggest mistake in world science and nobody wants to correct it."
